

Foam Marker

Principal Functioning Agents

Surfactants and Formulation Aids.....100%

Recommended rates

Add 5-8 mL/100 L of water based spray solution. Turf Pride Foam Marker may be used with all types of spray equipment.

Direction for use

Shake or agitate before each use.

Fill foam tank one-half full of water and add Turf Pride Foam Marker at the rate of 5 mL/ L of water. Fill remainder of tank with water by placing the water hose in bottom of tank. Fill slowly to avoid premature foaming.

If foam is watery or runny, add more concentrate in small increments until thick "shaving cream" foam is produced. If foam is too thick, add water.

With extreme hard water, an increased amount of concentrate will be needed. Best results will be achieved if water temperature is 13°-27°C. If water temperature is below 13°C, more concentrate may be needed to achieve desired results. Foam-generating tanks should be clean and free of other chemicals before adding concentrate.
