

## Fall Grub Curative Control with Arena®.

Arena® Insecticide delivers superior curative control of white grubs when applied in August and September. And with its superior activity, Arena brings peace of mind. When other shorter residual insecticides require retreatment, Arena lasts – even in drought conditions when grubs can move below the treatment zone for weeks before coming back up to damage turf roots.

- Superior and consistent curative white grub control, including European and Masked chafer
- Curative speed greater than well-known competitive products
- Only product where a Spring Curative application provides season-long Preventative control
- Does not need to be immediately watered-in, saving time and labor
- With superior residual activity, lasts even during droughty conditions when grubs can temporarily move below the insecticide treated zone

White Grubs Controlled	Application Rate	Application Timing
<ul style="list-style-type: none"> <li>• Asiatic garden beetle</li> <li>• European chafer</li> <li>• Japanese beetle</li> <li>• Oriental beetle</li> <li>• Masked chafer</li> </ul>	2.5 – 5.0 g/100m <sup>2</sup>	<ul style="list-style-type: none"> <li>• Apply when evidence of grub activity is noted – August or September</li> <li>• Best control and turf protection achieved if applied prior to third instar</li> <li>• Use upper end of rate range in post hatch applications</li> <li>• Use of recommended water volumes will ensure consistent control</li> </ul>

Arena offers timing flexibility to fit your work schedule without giving up excellent white grub control

Your Nufarm Technical Manager and Turfgrass Manager are always available to answer any questions you may have on the best choice for control for curative grub control.
