

Use of mined minerals under the Canadian Organic Regime (COR)

Manufacturer's name: ACG Materials

Product name: Valu-Fill Coarse Grind

Ingredients: Naturally Occurring Mined Gypsum Rock (CaSO₄-2H₂O)

I confirm that this product was produced according to the following characteristics:

- It is a naturally mined mineral
(NOTE: potassium sulphate manufactured by combining naturally mined potassium chloride, naturally mined sodium sulphate and water is considered as a naturally mined mineral)
- It has not undergone any change in its molecular structure through heating or combining with other substances and was not processed or fortified with synthetic chemicals**
- Does not contain synthetic additive (example: petrochemical dust suppressing agent, binders, formulants, etc.)

* **Non-synthetic substance (CAN/CGSB-32.310-2015-3.39)**: substance derived from mineral, plant or animal matter that has not been chemically altered.

** **Synthetic substance (CAN/CGSB-32.310-2015-3.65)**: manufactured substance, including petrochemicals, formulated by a chemical process or by a process that chemically alters compounds extracted from plant, micro-organisms, animal or mineral sources. This term does not apply to compounds synthesized or produced by physical processing or biological processes, which may include heat and mechanical processing. However, minerals altered through chemical reactions caused by heating or burning shall be classified as synthetic.
