RE: Using Pace Solutions Corp.'s Products on Medical Cannabis Plants

Dear Ms. Wildman,

Over the past several years, PACE Solutions Corp. has been requested numerous times for stamped documentation from either the PMRA, the CFIA or Health Canada for our products when it comes to Medical Cannabis production. Unfortunately, the government agencies do not provide specific cannabis pieces of literature.

With regards to PACE's Health Canada Registered Hard Surface Disinfectant, Chemprocide (DIN 00568236) and PMRA Registered Green House Sanitizer, KleenGrow (PCP 13148), both of these products are approved for their use patterns as indicated on their labels and must not be sprayed directly on the cannabis plants themselves but can be used on hard surfaces, such as, tools, empty growing benches, and packing line disinfection.

PACE's cleaning products, Strip-It, Horti-Klor, and Clean-Up, are all CFIA approved food plant cleaning products and may be used per the label instructions.

UpTake, wetting agent and surfactant (Registration Number 2015072A Fertilizers Act) cannot be sprayed directly on the crops but can be used through irrigation lines directly to the root zones at low ppm per the label instructions to help deliver fertilizer more evenly to the root zone.

Always follow label instructions or for further clarification, please contact your PACE Solutions Corp. representative.

Sincerely,

A handwritten signature in black ink that reads "Ho Yi Lau".

Ho Yi Lau
