RE: Carey dried dolomite (packaged products)  
Carey #80 Dried Dolomite in 50 pound bags

To Whom It May Concern:

National Lime and Stone Co. (NLS) dried dolomite is processed from rock quarried from a naturally occurring dolomite deposit at Carey, Ohio. The rock is crushed, screened, possibly washed with water, dried, possibly crushed and screened again, stored in elevated weather tight "finished product" silos, transported by bulk pneumatic truck to an NLS packaging plant, and then packaged.

No other ingredients are added to Carey dried dolomite, and the material is not changed chemically (other than moisture content) as a result of the manufacturing process. Please contact me with any questions.

Yours truly,

A handwritten signature in black ink that reads "James Welshimer". The signature is written in a cursive style with a prominent initial "J" and a long, sweeping underline.
