PLANTPRODUCTS®

Biorational approach to pest control

In light of the demand from consumers and retailers to provide plant material with products that are non-controversial, growers are concerned if they can continue to produce the same high quality material and still stay profitable. Plant Products has the solution.

Our programs of integrated pest management, coupled with our technical expertise and portfolio of bio pesticides have been proven to result in successful control of undesirable pests. We see this as an opportunity for our customers to use products with little or no REI (Re-Entry Interval) so your labor planning becomes much more adaptable to your busy schedule.

Our knowledgeable, technical support team has proven successful programs to help you achieve high quality plants with customer demands in mind.

See a wide range of MPS color coded products listed (for you the grower) to achieve the desired results.

Everything you need **to grow.**

Control major pests with:

Use biological insects in combination with the following :

Bio insecticides

- Aza-Direct
- Ancora
- BioCeres
- Botanigard
- Captiva Prime
- Grandevo
- Kopa
- M-Pede
- Millenium
- Nemasys
- NoFly
- TetraCURB Concentrate
- Velifer
- Venerate

Bio fungicides

- Actinovate
- BotryStop
- Cease
- EcoSwing
- Lalstop G46
- Lalstop K61
- Milstop
- Mycotrol WPO
- Regalia
- Rootshield
- Rootshield Plus
- SuffOil-X
- Tenet WP
- TerraGrow

➤ Prohibited

➤ Biological enemies or agents

➤ Traditional active ingredients

LALSTOP G46 WG

Biological and natural alternative to chemical control

LALSTOP® G46 WG is an EPA-registered biological fungicide used in the production of vegetables, fruits, herbs, and ornamentals. It is a naturally occurring soil fungus that contains mycelium and spores of the *Gliocladium catenulatum* strain J1446 that controls a range of crop diseases.

- EPA Registered and OMRI listed biofungicide
- Based on a naturally occurring soil fungus *Gliocladium catenulatum* strain J1446
- Easy and safe to use
- Compatible with IPM programs
- Good resistance management tool for rotation of fungicides
- No PHI is needed
- Package size 3.5 oz (100 gr) and 2.0 lbs (0.908 kg)

EcoSwing®

Biological Fungicide

EcoSwing® is a botanical fungicide created using proprietary plant extracts. EcoSwing® has been a leader in fungicidal control of several key pathogens globally for many years. Incorporating EcoSwing as a preventative application into an integrated pest control program allows for the addition of an alternative mode of action for improved disease control and resistance management
