

Prevention Strategies

An Ounce Of Prevention = A Pound Of Cure!

Now that the challenges of getting your crops planted and growing is behind you, it's time to ensure that your irrigation system can deliver the needs of your crop. It's time for Antibloc™.

Antibloc™ Mineral

For the removal and prevention of mineral blockages (Calcium and Iron complexes etc.) in irrigation lines.

- Safe on most crops at labeled rates
- Safe to use, "neutral product"
- Higher Accuracy of water delivery due to less mineral build up in lines
- Reduces the incidence of irrigation fouling due to a decrease of Organic build up.
- Can be injected solely, or added to Stock tanks (Some modification of "B" tank is required)
- 200 litre (260 kg) packaging

Antibloc™ Organic

For the removal of organic blockages (Algae, etc.) in irrigation lines.

- Safe on most crops at labeled rates
- Simple test to insure Anti-Bloc II concentrations are achieved
- Stock tanks should be excluded from light
- Can be injected solely, or added to Stock tanks (Some modification of "B" tank is required)
- 20 litre (24 kg.) packaging
